ROLLING IRONS

sense of self patent Rolling Upgrade

The originality of the ROLLING UPGRADE iron is that it can rotate at 360 degrees the heating rod titanium, creating beautiful curls and ringlets well defined in a very short time. The use of the ROLLING is very simple: it is sufficient to lock a lock of hair in the clamp placed over the bar and rotate this with your index fingers and thumb, rolling the strand around the bar. At the tip of the iron ROLLING UPGRADE is placed a strip of teflon of red color, which serves to indicate the variation of the temperature of the iron, to become white in color. This means that the appliance has reached the set temperature and then is ready for use. The iron ROLLING UPGRADE has a digital display where you can view and set the desired temperature. The appliance is automatically programmed to reach the temperature of 180 degrees, so it is possible subsequently, by the darts placed on the handle, set the temperature from a minimum of 50 degrees to a maximum of 210 degrees. Titanium allows you to have a uniform temperature across the bar, allowing the remarkable results.
