STAMIKER

plant stem cell, keratin and white Lupin

- repair
- regeneration
- loss prevention against alopecia

STAMIKER is the revolutionary new line of SYSTEMCOIFFEUR treatments. Enriched with stem cells and Keratin, opera for repair and regeneration of hair. The presence of white Lupin extract also plays an ancillary action against hair loss.

With STAMIKER fiber is reinforced in its structure and stem the innate resistance of a natural hair; the skin regains perfect hydrolipidic balance and a complete well-being; hair loss is contrasted.

High-PERFORMANCE assets:

- STEM CELLS that reactivate the hydrolipidic balance of the skin and regenerate the hair from the root. Those used in STAMIKER line derived from Syringa Vulgaris, commonly known as LILACS or serenella. A particular biotechnological process extracts from in vitro culture of these stem cells, the Verbascoside, a pure active ingredient with a high antioxidant action (4 times the vitamin C) and aging.
- Keratin that repairs and rebuilds the stem from the very heart of the fibres and the full length; Keratin, main constituent of hair, is a protein that consists of a long polypeptide chain helical structure, that contain amino acids, vitamins and trace elements, which penetrate inside the cuticles, reconstruct the hair and fasten on the stem.
- EXCERPT FROM the WHITE LUPIN, ANAGELINE ®, a patented substance to texture and flesh out the structure, supporting the prevention of hair loss. Boasting a reactivation process of hair cycle and reducing the effects of alopecia, with demonstration of clinical trials.

NEWGEN SHAMPOO

Antiage regenerating and repairing shampoo provides a synergistic action of stem cells

and keratin.
